Introduction
Whenever you create a new workbook in Excel, you'll need to know how to **save** it in order to access and edit it later. As with previous versions of Excel, you can save files **locally** to your computer. But unlike older versions, Excel 2016 also lets you save a workbook to **the cloud** using **OneDrive**. You can also **export** and **share** workbooks with others directly from Excel.

About OneDrive

Whenever you're opening or saving a workbook, you'll have the option of using your **OneDrive**, which is the online file storage service included with your Microsoft account. To enable this option, you'll need to **sign in** to Office. To learn more, visit our lesson on **Understanding OneDrive**.

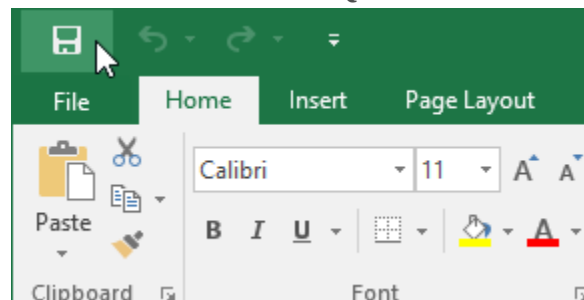

Save and Save As

Excel offers two ways to save a file: **Save** and **Save As**. These options work in similar ways, with a few important differences:

- •**Save**: When you create or edit a workbook, you'll use the **Save** command to save your changes. You'll use this command most of the time. When you save a file, you'll only need to choose a file name and location the first time. After that, you can just click the Save command to save it with the same name and location.
- •**Save As**: You'll use this command to create a **copy** of a workbook while keeping the original. When you use Save As, you'll need to choose a different name and/or location for the copied version.
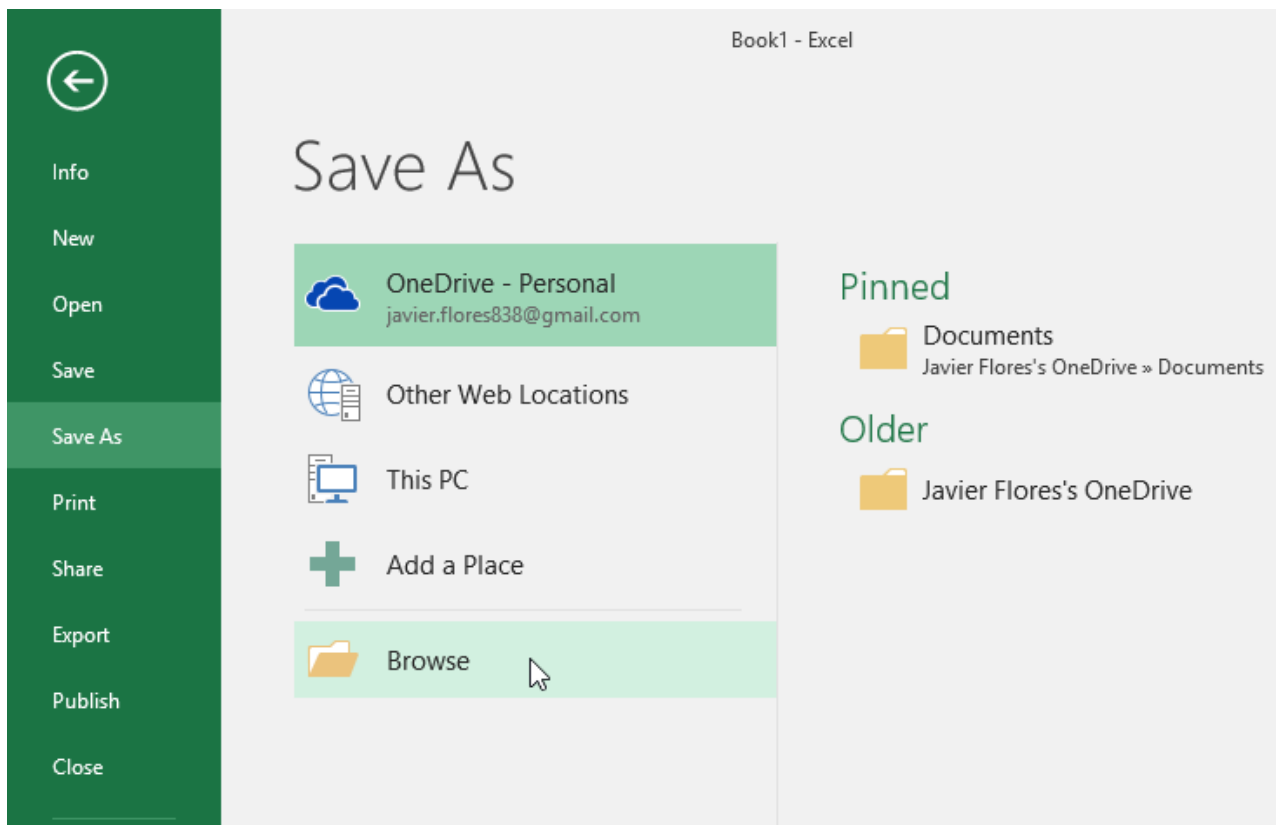

To save a workbook:

It's important to **save your workbook** whenever you start a new project or make changes to an existing one. Saving early and often can prevent your work from being lost. You'll also need to pay close attention to **where you save** the workbook so it will be easy to find later.

1.Locate and select the **Save** command on the **Quick Access Toolbar**.

2.If you're saving the file for the first time, the **Save As** pane will appear in **Backstage view**.

3.You'll then need to choose **where to save** the file and give it a **file name**. To save the workbook to your computer, select **Computer**, then click **Browse**. Alternatively, you can click **OneDrive** to save the file to your OneDrive.

4.The **Save As** dialog box will appear. Select the l**ocation** where you want to save the workbook.

**5.**Enter a **file name** for the workbook, then click **Save**.

6.The workbook will be **saved**. You can click the **Save** command again to save your changes as you modify the workbook.

Using Save As to make a copy

If you want to save a **different version** of a workbook while keeping the original, you can create a **copy**. For example, if you have a file named **Sales Data**, you could save it as **Sales Data 2** so you'll be able to edit the new file and still refer back to the original version.
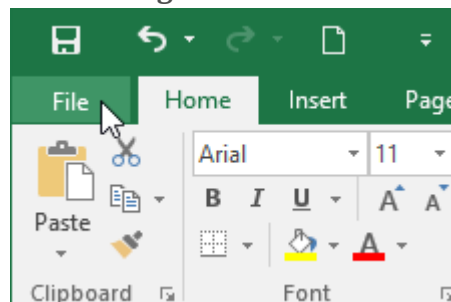

To do this, you'll click the **Save As** command in Backstage view. Just like when saving a file for the first time, you'll need to choose **where to save** he file and give it a new **file name**.

To change the default save location:

If you don't want to use **OneDrive**, you may be frustrated that OneDrive is selected as the default location when saving. If you find it inconvenient to select **Computer** each time, you can change the **default save location** so **Computer** is selected by default.
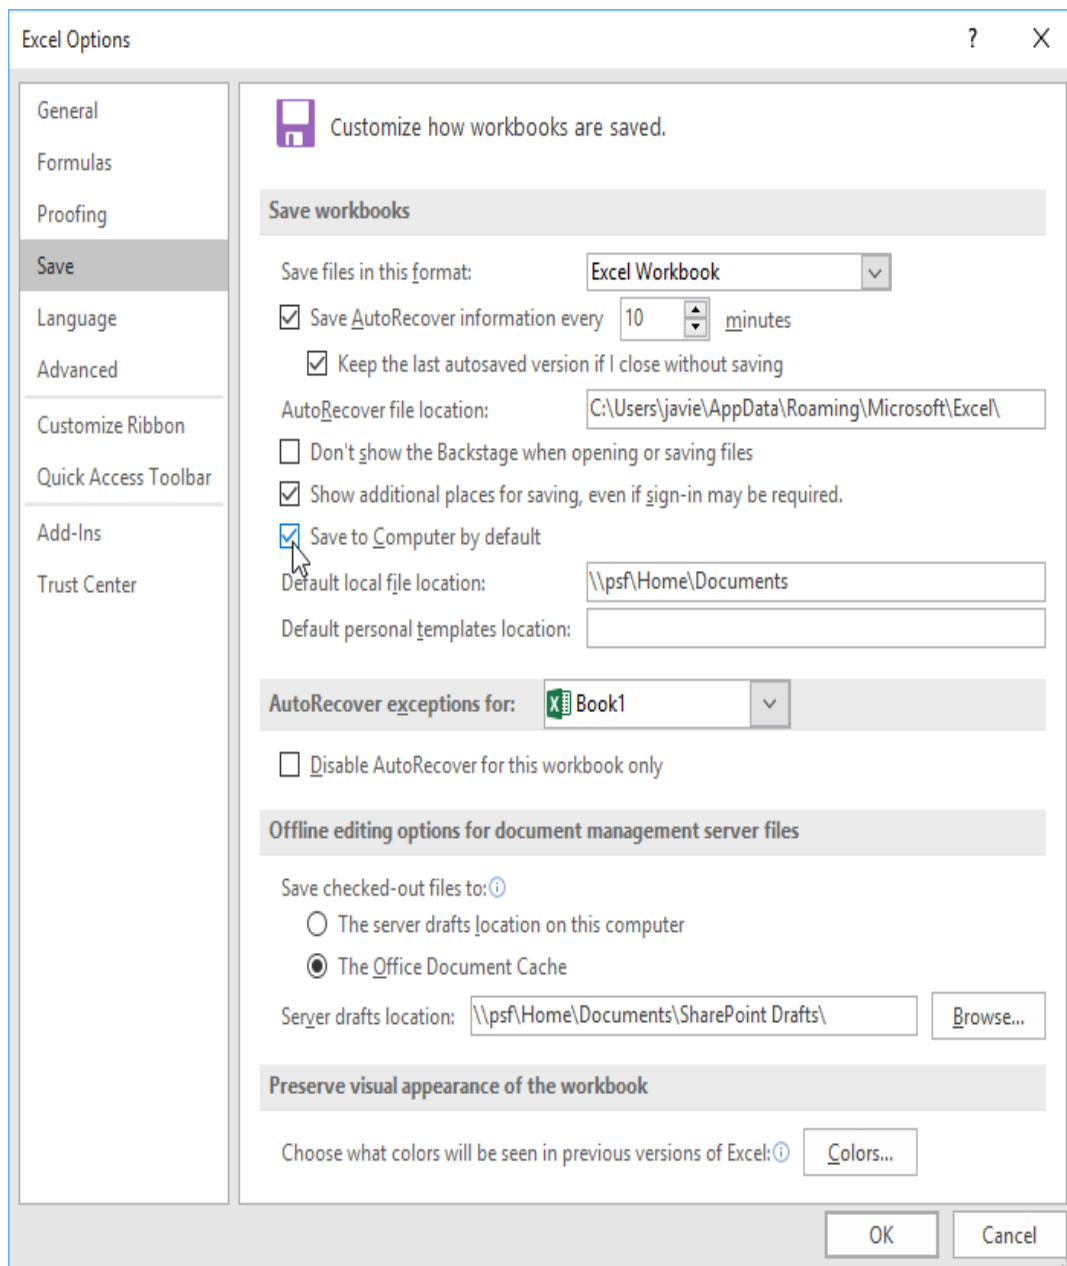

1.Click the **File** tab to access **Backstage view**.

2.Click **Options**.

3.The **Excel Options** dialog box will appear. Select **Save**, **check the box** next to **Save to Computer by default**, then click **OK**. The default save location will be changed.
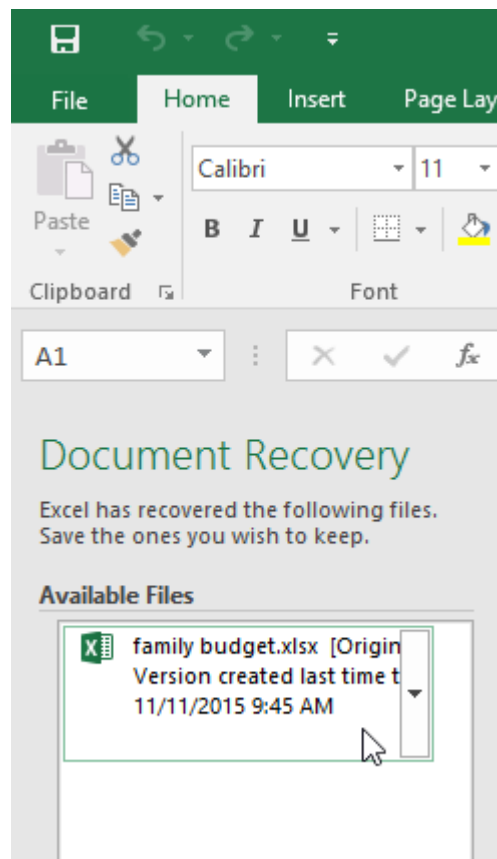

AutoRecover

Excel automatically saves your workbooks to a temporary folder while you are working on them. If you forget to save your changes or if Excel crashes, you can restore the file using **AutoRecover**.
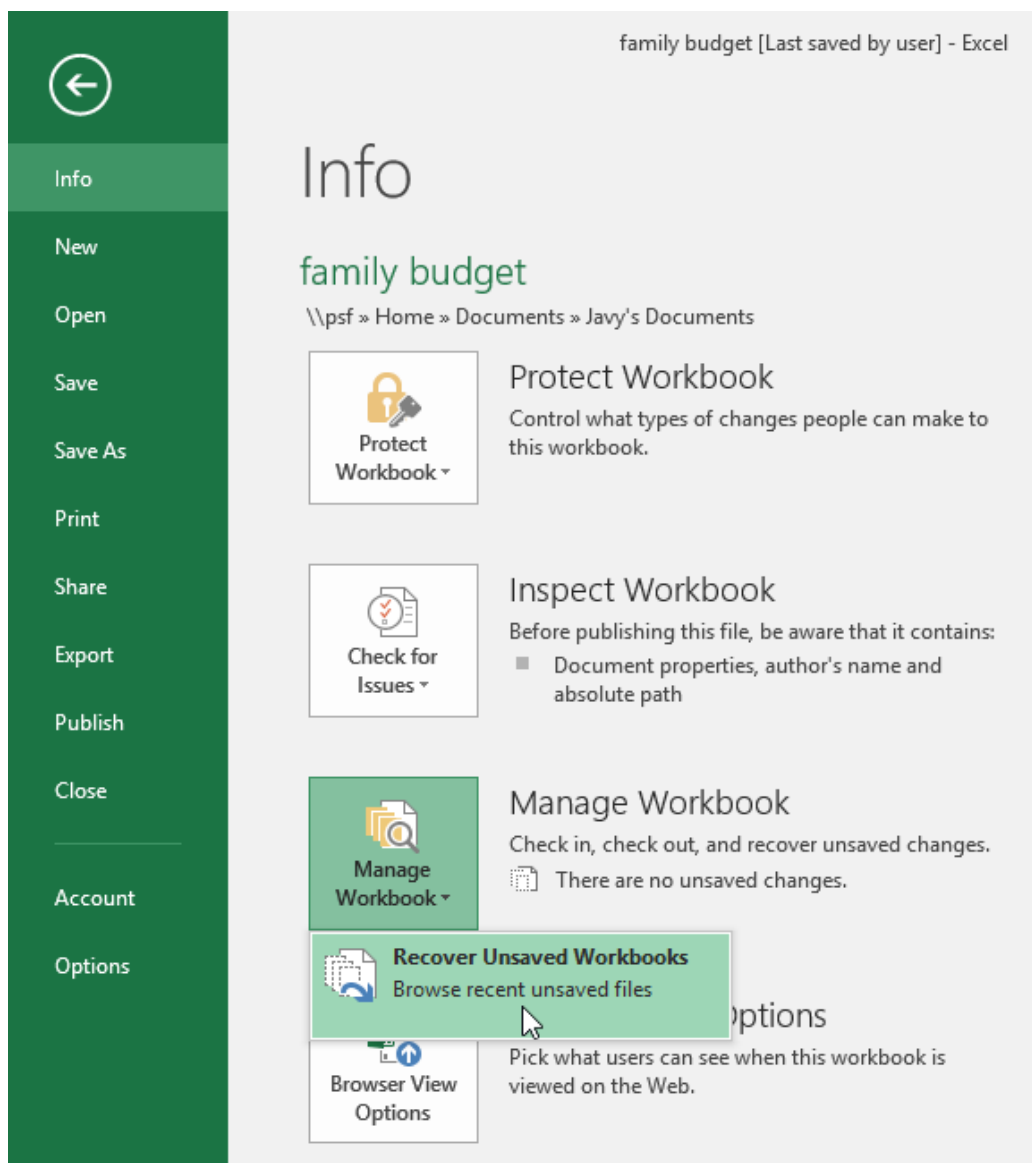

To use AutoRecover:

1. Open Excel. If **autosaved versions** of a file are found, the **DocumentRecovery** pane will appear.
2. Click to **open** an available file. The workbook will be **recovered**.

By default, Excel autosaves every 10 minutes. If you are editing a workbook for less than 10 minutes, Excel may not create an autosaved version.

If you don't see the file you need, you can browse all autosaved files from **Backstage view**. Just select the **File** tab, click **Manage Versions,** then choose **Recover Unsaved Workbooks**.
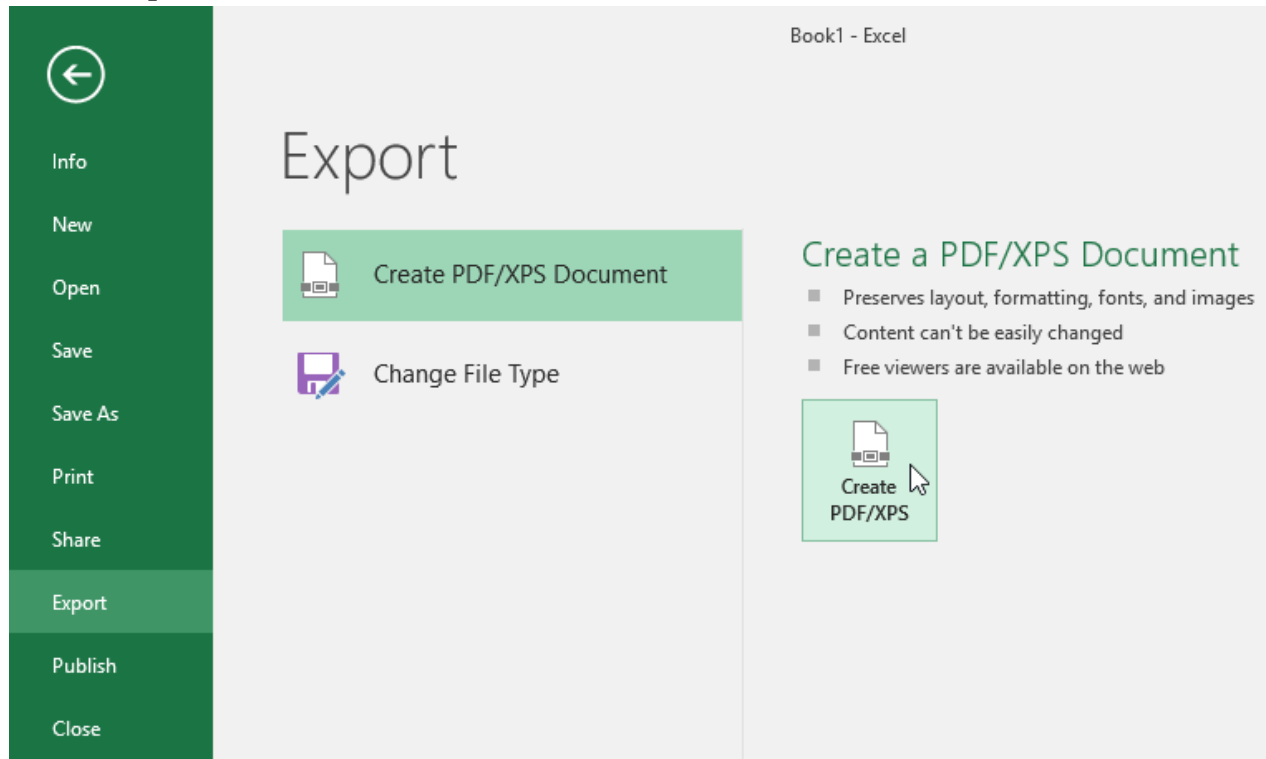

Exporting workbooks

By default, Excel workbooks are saved in the **.xlsx** file type. However, there may be times when you need to use **another file type,** such as a **PDF** or **Excel 97-2003 workbook**. It's easy to **export** your workbook from Excel to a variety of file types.

To export a workbook as a PDF file:

Exporting your workbook as an **Adobe Acrobat document**, commonly known as a **PDF file**, can be especially useful if you're sharing a workbook with someone who does not have Excel. A PDF will make it possible for recipients to view but not edit the content of your workbook.
      1.Click the **File** tab to access **Backstage view**.

**2.**Click **Export**, then select **Create PDF/XPS**.

3.The **Save As** dialog box will appear. Select the **location** where you want to export the workbook, enter a **file name**, then click **Publish**.

By default, Excel will only export the **active worksheet**. If you have multiple worksheets and want to save all of them in the same PDF file, click **Options** in the **Save As** dialog box. The **Options** dialog box will appear. Select **Entire workbook**, then click **OK**.

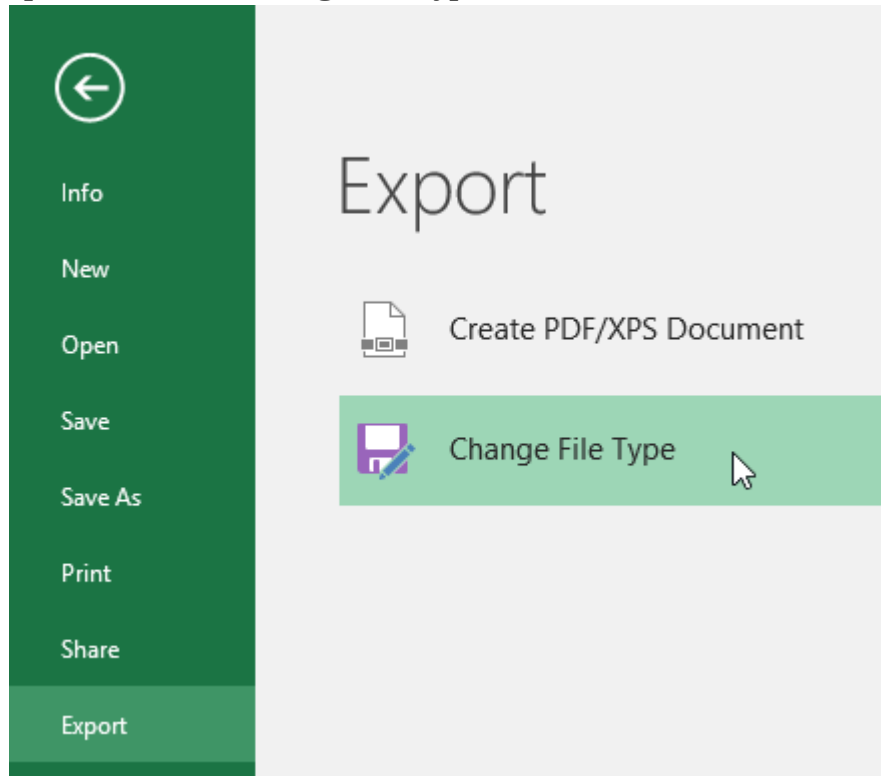

Whenever you export a workbook as a PDF, you'll also need to consider how your workbook data will appear on each **page** of the PDF, just like **printing** a workbook. Visit our **Page Layout and Printing** lesson to learn more about what to consider before exporting a workbook as a PDF.

To export a workbook to other file types:

You may also find it helpful to export your workbook to other file types, such as an **Excel 97-2003 workbook** if you need to share with people using an older version of Excel, or a **.CSV file** if you need a **plain-text version** of your workbook.

     1.Click the **File** tab to access **Backstage view**.
     2.Click **Export**, then select **Change File Type**.

     3.Select a common **file type**, then click **Save As**.

Change File Type

Workbook File Types

Workbook
Uses the Excel Spreadsheet format

Excel 97-2003 Workbook
Uses the Excel 97-2003 Spreadsheet format

OpenDocument Spreadsheet
Uses the OpenDocument Spreadsheet format

Template

Optimized for fast loading and saving

Other File Types

Text (Tab delimited)
Text format separated by tabs

CSV (Comma delimited)
Text format separated by commas

Formatted Text (Space delimited)
Text format separated by spaces
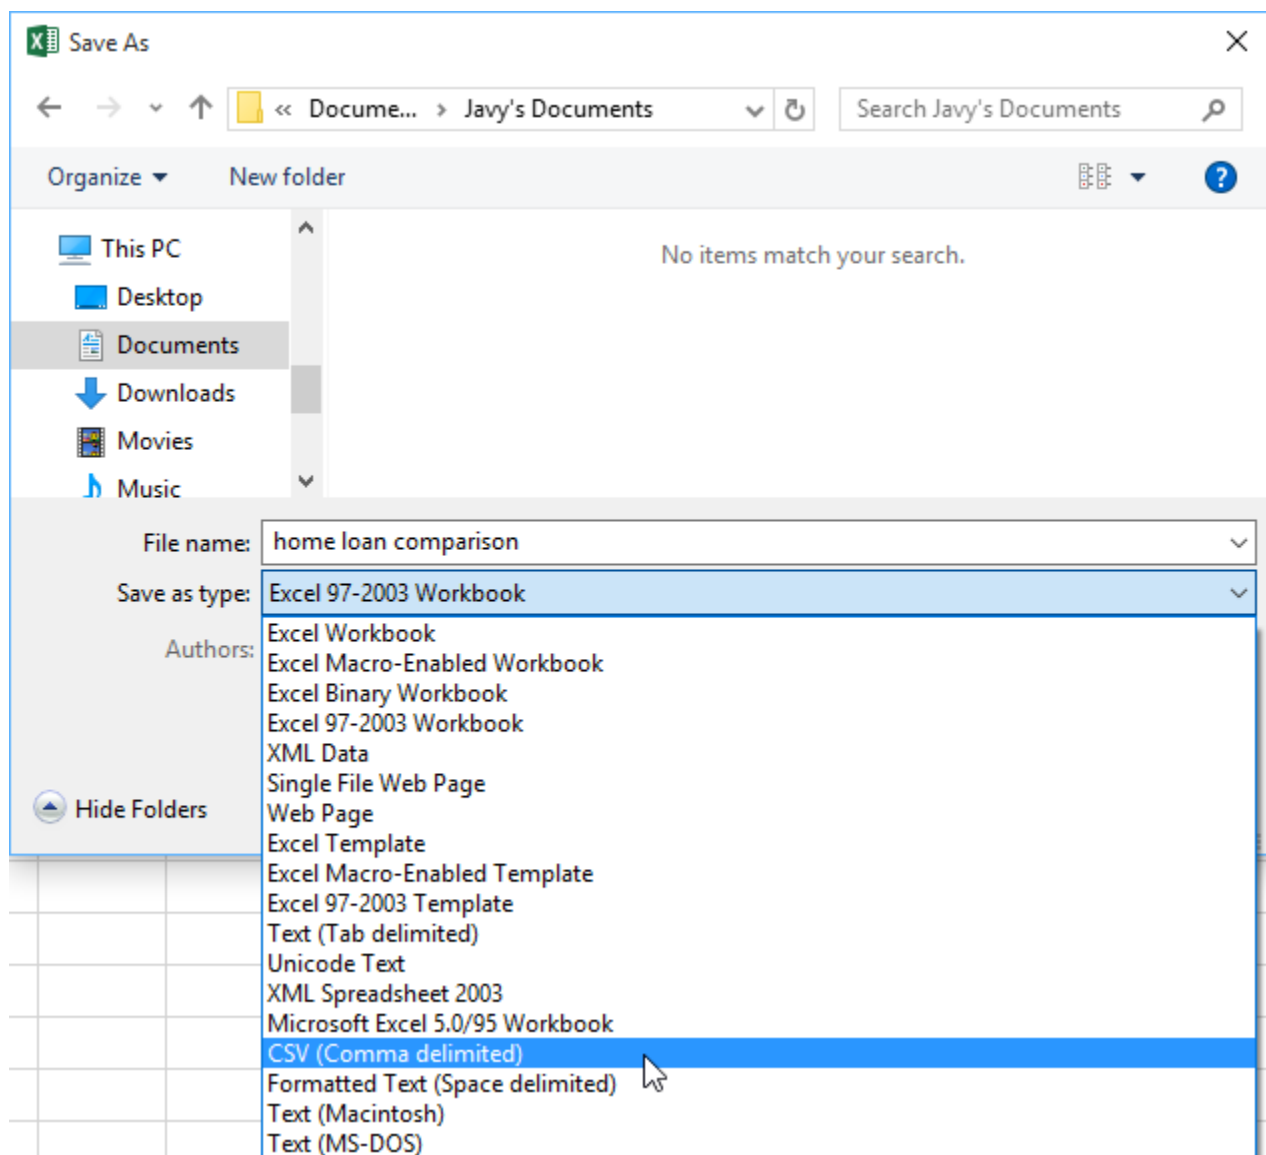

Save as Another File Type

Save As

4.The **Save As** dialog box will appear. Select the **location** where you want to export the workbook, enter a **file name**, then click **Save**.

You can also use the **Save as type:** drop-down menu in the **Save As** dialog box to save workbooks in a variety of file types.
Sharing workbooks

Excel makes it easy to **share and collaborate** on workbooks using **OneDrive**. In the past, if you wanted to share a file with someone you could send it as an email attachment. While convenient, this system also creates **multiple versions** of the same file, which can be difficult to organize.

When you share a workbook from Excel, you're actually giving others access to the **exact same file**. This lets you and the people you share with **edit the same workbook** without having to keep track of multiple versions.
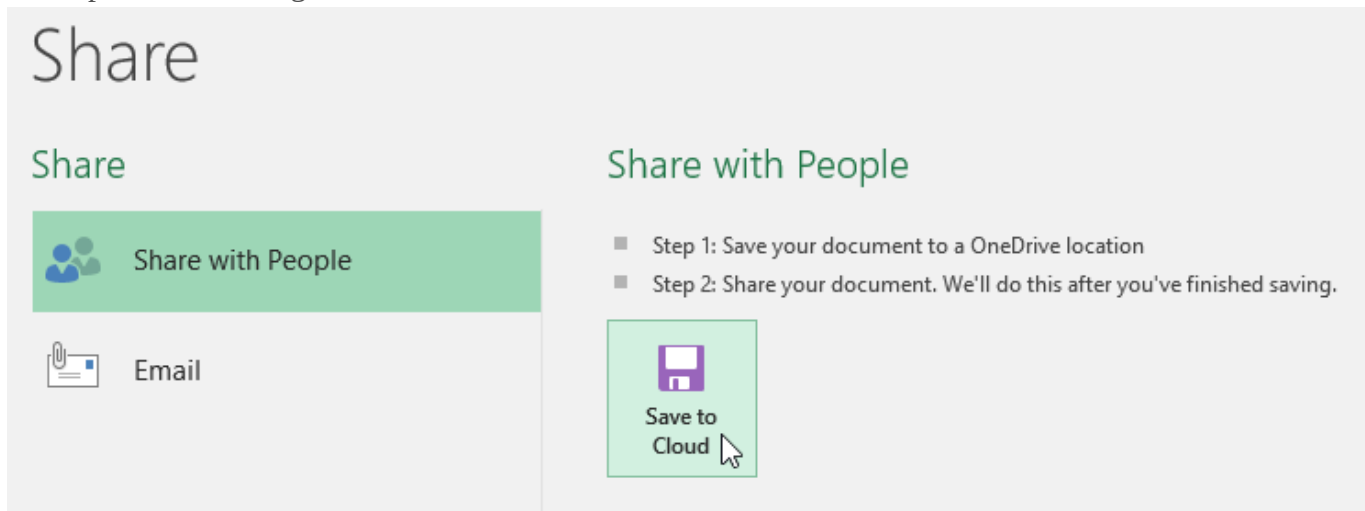

In order to share a workbook, it must first be **saved to your OneDrive**.

To share a workbook:

1. Click the **File** tab to access **Backstage view**, then click **Share**.

2.The **Share** pane will appear. If you have not already done so, you will be prompted to save your document to **OneDrive**. Note that you may need to navigate back to the Share pane after saving.

3.On the **Share** pane, if your document is saved to OneDrive, click the **Share with People** button.

4. Excel will return to Normal view and open the **Share** panel on the right side of the window. From here, you can invite people to share your document, see a list of who has access to the document, and set whether they can edit or only view the document.
